I was reading these two posts on how to improve your work: My work is not reproducible and I blame a typo in the environment settings. How can I make it reproducible? Fixing a TypeError I'm getting while using subprocess with a python script In the second post he proposed a workflow in order to improve reproducibility (see section 1.3 of that post): Saving logs to a file: Ideally the solution should produce a file, or write to a file, on exit. Analysing the log, and reproducing the error, can be difficult. So we'll need something that will help. Create a virtual environment in the same

directory: We'll try and replicate the problem. Restore the environment: Hopefully we'll be in the same situation, as before. Run the script. Check the log. I completely agree with the first point, but I don't know what is meant by a log. For me a log is just a piece of information, like a1d647c40b
